1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving and evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze ArborText's interpretation and use of the CALS standards in transferring technical publication data. ArborText used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Test Plan: AFCTB 92-064

Date of Evaluation: 14 October 1992

Evaluators: George Elwood
Air Force CALS Test Bed
DET 2 HQ ESC/ENCP

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with the magnetic tape warning label, as required by MIL-STD1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag material as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the required label indicating the recording density as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The tape was run through the AFCTN *Tapetool* v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was also read using XSoft *CAPS read1840A* without a reported problem.

3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration file header or data file headers.

4. IGES Analysis

This tape contained six IGES files. All files were evaluated using IDA's *Parser/Verifier* set to check for the CALS Class I standards. No specific AFCTN errors were reported. Files D001Q007 and D001Q009 reported basic IGES errors. None of the files contained the required CALS statement defined in MIL-D-28000A, para. 3.2.1.3.1.

File D001Q007 was reported with multiple polynomial faults.

*** Entity type: 112

WARNING 2238: Polynomial segment (0) at D 23 is degenerate.

File D001Q009 was reported with a severe error with entity type 102.

*** Entity type: 102

SEVERE 2116: Invalid entity type (D 21) for composite curve at D 27.

102	35	0	1	0	0	0	000010101D	27	
102	1	0	1	0			0D	28	
102,2,21,25,0,1,23;								27P	35

The IGES files were imported into various software utilities available within the AFCTB. The two files discussed above were selected for the additional procedure. File D001Q007 was a drawing of a helicopter. The translation into Cadkey's *Cadkey* was made without a reported error. When the files were displayed and printed, the circles showing the station location were noted to have double lines.

The files were converted using ArborText's *iges2draw* utility without a reported error. When the resulting files were imported into Island Graphics' *IslandDraw*, the circles were noted as being filled.

The files were imported into IDA's *IGESView* without a reported errors. When the images were displayed and printed the circles were noted as being filled with a crosshatch.

The files were converted using Rosetta Technologies' *Prepare* and displayed using *Preview*. Errors were generated during the translation procedure, with some being unsupported entities. The resulting image displayed random line across the page and double circles were also noted.

The files were converted using XSoft's *CAPS iges2ps* utility. No errors were reported during the process. The resulting files displayed the double circles which were filled with a crosshatch.

The files were imported into ITI's *IGESWorks*. Errors were reported during this process relating to precession and entity conflicts. The files displayed with the double circles noted. These circles were noted as being a different color and therefore an added entity.

File D001Q009 was also run through these same software packages. Cadkey's *Cadkey* translated the file with reported errors. The resulting image appeared to be correct. ArborText's *iges2draw* utility reported no errors and the displayed and printed image appeared to be correct.

IDA's *IGESView* filled the area with a solid and made the image unusable.

Rosetta Technologies' *Prepare* reported errors, with most being unsupported entities and other major IGES problems during the conversion, and displayed the background as a crosshatch.

The file was converted using XSoft's *CAPS iges2ps* utility. No errors were reported but the conversion took several minutes. The resulting files appear correct except that the crosshatching makes the text hard to read. The word "WORKS" also fell outside the defined boundary.

The file was imported into ITI's *IGESWorks* with reported errors. When the file was displayed parts of the image did not display or print.

The selected IGES files had problems in the other utilities available in the AFCTB. No CALS errors were reported from

the parser but the lack of the required CALS statement prevents these files from meeting the CALS MIL-D-28000A specification.

5. SGML Analysis

The Text file from this document was tested using Exoterica's *XGMLNormalizer* parser. This tape is a demonstration of the capability of ArborText's system. As part of the capability they broke the DTD up into sections, with each section containing added tags. The DTD parsed and the document also parsed without error. The DTD and Text files meet the CALS MIL-M-28001A specification.

6. Raster Analysis

This tape contained two Raster files. Both files were reported as being valid CALS Raster files by the AFCTN *validg4* utility.

The files were imported into the AFCTN *calstb.475* utility. No problems were noted. The images were straight and no orphan pixels were noted.

Both files were converted to an IMG format using Inset Systems' *HiJaak* and then imported into Corel's *Ventura Publisher*. No problems were reported during this procedure.

The files were converted using Rosetta Technologies' *Prepare* and viewed and printed using *Preview*. No problems were noted.

The files were converted using ArborText's *g42tiff* utility and imported into Island Graphics' *IslandPaint*. No problems were noted.

The Raster files meet the CALS MIL-R-28002A specification.

7. CGM Analysis

The tape contained two CGM files. Both files were evaluated using ATC's *MetaCheck* with CALS options. This software reported that both files were valid files. File D001C010 was reported with some basic CGM errors.

The files were checked using the AFCTN *validcgm* utility. This utility reported that both files had errors. The errors were in both the basic CGM and CALS requirements.

Both files were imported into SPC's *Harvard Graphics* v3.0 without a reported problem. The images displayed and printed without problem.

Both files were imported into Corel's *Ventura Publisher* without a problem. The output is included in the Appendix to this report.

When the files were read into ATC's *CGMView*, nothing displayed on the screen. Several options were tried without luck. No error message was generated during this process.

The files were read into ATC's *MetaView* without reported problems. Both files were displayed.

The CGM files, based on the ATC *MetaCheck* report, meet the CALS MIL-D-28003 specification. The AFCTN *validcgm* is known to have a bug as a result errors have been listed.

8. Conclusions and Recommendations

In summary, the tape from ArborText, Inc. was correct. IT could be read properly using the AFCTN Tapetool and XSoft read1840A without a reported error.

The IGES files, because of a lack of the MIL-D-28000A statement in the Start section, do not meet the CALS specification. The files were translated and printed using various IGES tools available with varying degrees of success.

The SGML's DTD and Text files were successfully parsed. The example provided by ArborText was complex, showing the ability of their software. The nature of the DTD required additional work during the parsing operation. The SGML files meet the CALS MIL-M-28001A specification.

The Raster files meet the CALS MIL-R-28002A specification. No problems were encountered while working with the files.

The CGM files meet the CALS MIL-D-28003 specification, using ATC's *MetaCheck* with CALS options. The files were successfully imported into various software applications without a problem.

The tape from ArborText meets the CALS MIL-STD-1840A requirements, with the exception of the IGES files.
